Session Strings

Demo Song Installation Guide

Important information: The demo song content will only work if Session Strings has been already installed. The demo song content does not include any samples or audio files.

1. Package contents

The demo package contains the following songs:

1. Flight Of The Blackbirds
2. Disco Strings Solo

Each song is available in four different formats:

1. Apple Logic
2. Steinberg Cubase
3. Ableton Live
4. Standard MIDI file + KONTAKT .nkm Multi

2. System Requirements

- Installed Session Strings
- Apple Logic: Ver. 9 or higher
- Steinberg Cubase: Ver. 4 or higher
- Ableton Live: Ver. 8.1 or higher
- Standard MIDI file: DAW with Session Strings installed

3. Set up

In order to start the demo songs, simply open one of the song files in your DAW/host sequencer (Logic, Cubase or Live).
In case the format of your preferred DAW/host sequencer is not available, simply follow the instructions below:

- Open KONTAKT in your DAW/host sequencer.
- Load the KONTAKT Multi (.nkm) of one of the two songs.
- Note that you will need only one(!) KONTAKT instance for the entire demo song.
- Create multitimbral tracks in your DAW/host sequencer. You will need 14 tracks for "Flight Of The Blackbirds" and 9 tracks for "Disco".
- Open the demo song MIDI file (.mid.)
- Route each MIDI track to the corresponding KONTAKT input by following the channel information given in the song tracks (MIDI track 1 -> Kontakt MIDI input 1, (MIDI track 2 -> Kontakt MIDI input 2 etc.).
- Each track should now be correctly assigned to the corresponding nki in the KONTAKT Multi.

We do hope that you will enjoy the demos. Feel free to play around with them and explore the details of the programming.
